

Psychiatrist

Psychiatrists are mental health doctors. They can help...

...assess and plan treatment for mental health difficulties. Help problems with your thoughts and feelings.

... advise GPs about tests or investigations that might help you.

... see if there are medicines that may help.

... if you already take medicine, see if you still need them.

... give advice to other professionals that help you.

We will work with...

- You
- Your family or carers
- The learning disability team
- If needed, the intensive support team or Crisis team

We can see you in a clinic. If needed, we can see you at home.
