Finger injuries

You have had a minor fracture/sprain to the finger. If you can follow this advice, the injury should settle more quickly and with better results.

- The injured finger may have been strapped to a neighbouring finger to give support. The injured finger should be allowed to move with the other finger.
- For the first 48 hours after the injury, swelling may increase so it is important to keep the whole hand elevated. You may have been given a sling which should be worn when standing and walking around. When at home you can put your hand raised on a cushion when seated as an alternative. Do not wear the sling in bed.
- The strapping may be changed when necessary, please ensure the finger joints are left free so that the finger can move.
- You are advised to use this type of strapping for
.....days.
- You may be given an appointment for outpatients, fracture clinic or simply advised to see your family doctor if you or your child is still having problems.

Appointment date:

.....

Further advice

If you have any general questions or need advice quickly, contact NHS **111** or log on to www.nhs.uk/111

You may also contact your Doctor during normal surgery hours. If the call to your Doctor is urgent and outside the normal surgery hours of 8.00am to 6.30pm, your surgery will redirect you to the appropriate out of hours service or advise you to call the NHS **111** number.

Out of hours – please call your own GP's out of hours contact number.

In an emergency, dial **999**.

Please read this leaflet carefully.

If you are concerned or there is anything you do not understand or you require further information, please contact your nearest Minor Injuries Unit or Urgent Care Centre using the contact details on the back of this leaflet.
